

## Datasheet: CO<sub>2</sub> Measuring device Digital White CO<sub>2</sub> MW 100

The microprocessor-controlled CO<sub>2</sub> measuring instrument is used to record the CO<sub>2</sub> content of the air in the range up to 2,000 ppm ,5,000 ppm or 10,000 ppm, as well as the temperature and humidity. The measuring signals are displayed by a digital display. All measuring signals are available as outputs. The CO<sub>2</sub> content of the air is determined by means of an optical sensor (NDIR), non-dispersive infrared technology. By using the sensor according to the dual principle, disturbances of the measurement by pollution and aging can be excluded as far as possible, so that a long function time of the device is ensured. Calibration is not necessary under normal operating conditions. The application range of the CO<sub>2</sub> measuring device is particularly recommended in teaching rooms, private rooms and conference rooms. The available outputs allow the control of complex processes regarding temperature, rel. humidity and the CO<sub>2</sub> concentration.

### Technical data

|                           |  |  |

Jumper–Position

Jumper 1      Output OUT1 position 1: 0-10 V output, position 2: 0-20mA output

Jumper 2      Output OUT2 position 1: 0-10 V output, position 2: 0-20mA output

Jumper 3      For RS 485 connection (jumper closed) For RS 485 connection (jumper closed)

The CON 3 port is not to be used. The CON 3 connection is not to be used
